

# New Hampshire Broadband Mapping & Planning Program

May, 2011

**What is the New Hampshire Broadband Mapping & Planning Program (NHBMP)?**

The NHBMP is a multi-year, multi-agency effort to map areas in the state that are currently served by the state's 50+ broadband providers. The Program, managed by GRANIT at the Complex Systems Research Center, University of New Hampshire (UNH), is a collaboration between UNH, the nine regional planning agencies in the state, and the NH Department of Resources and Economic Development/Division of Economic Development. The efforts of these organizations, other partners, and input from the public, along with the ongoing cooperation of the active service providers, is yielding a mapped inventory of existing and planned broadband assets, as well as a view of locations in New Hampshire where there is either no coverage or inadequate service.

In addition to the mapping activities, the NHBMP includes a 4-year planning component that will incorporate the information collected and the momentum generated by the mapping activities into a series of regional and state strategic initiatives. Collectively, these initiatives seek to encourage increased broadband usage and to promote expanded broadband deployment.

Results from the NHBMP are being integrated into a national broadband availability map, and will provide a solid foundation for future broadband deployment efforts at the state and national levels.
